

Mitsubishi Electric

Mitsubishi Electric has launched a new heating system that harvests and upgrades the energy found naturally in the outdoor air to minimise energy use within our homes and dramatically reduce carbon emissions. The Ecodan™ heat pump boiler gathers over 70 per cent of the heat energy it needs from the surrounding air, making it more efficient at providing heating and hot water. Ecodan, which has BRE testing to validate performance, uses a sealed vapour compression cycle similar to a domestic refrigerator to exchange heat between the outdoor air and the water supply.

Rubb Buildings

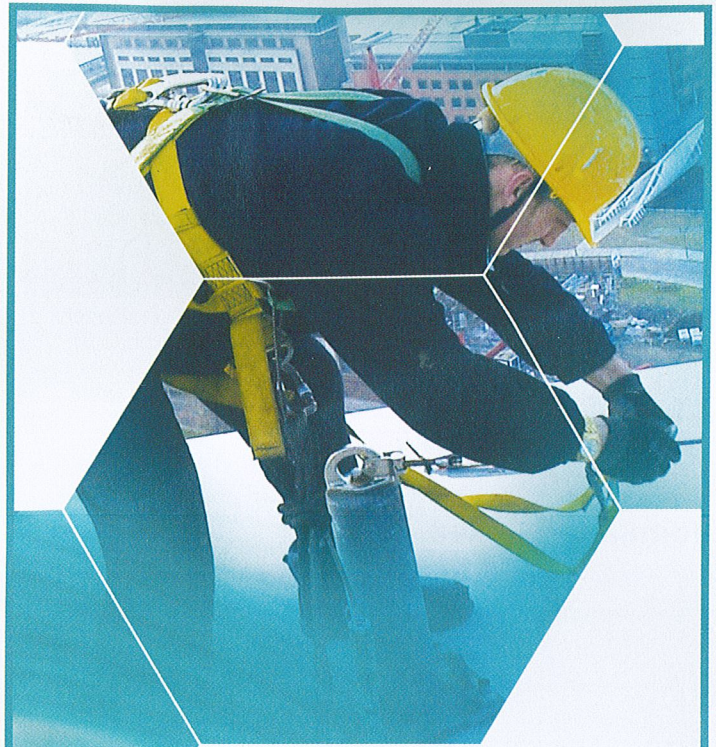

Rubb Buildings Inc. were commissioned to build a temporary structure for the maintenance and repair of rail engines for Amtrak, one of the United States major rail passenger service providers. The flexibility of the design and structure of the Rubb product were to

be a key factor on the project. With the building comprising of a galvanized steel frame with a high strength PVC coated polyester membrane and the limited foundations required were important factors in the construction. This adaptability enabled the building to be erected over existing railroad tracks, saving time and money.

MAKE THE WORKPLACE A SAFER PLACE

With stringent legislation and guidelines for safe working, protecting your maintenance employees from accidents or injury is vital.

OCS provides a range of safety systems designed to aid safe working and make compliance both easy and cost-effective:

- Latchway Mansafe
 - Eyebolts
 - Ladder Ties
- Installation, Inspection & Testing
 - Pushlocks
 - Roofanka
- Access Walkways
- Roof Edge Barriers
- Vertical Safety Ladders
