

PRESS RELEASE

New Boat Storage Facility at Townsend Bay Marine

Rubb Buildings, of Sanford, Maine, recently completed a custom built yacht storage facility for Townsend Bay Marine in Port Townsend, Washington. The structure, a 60' x 112.5' NV Range building, features a 45' vertical sidewall and an open end gable. Vessels up to 110' are moved into the facility with a 300 ton Travel lift.

Townsend Bay Marine is a full service boatbuilding and repair facility specializing in the construction and refitting of high end yachts. Key considerations in their selection of Rubb were the translucent roof, high sidewalls, and the ability to relocate the structure in the future.
