### Transdevelopment Group – Dundalk Terminals, Dundalk, Maryland

In August 2006, Rubb Buildings of Sanford, Maine completed the installation of a new 12,000 square foot automotive processing facility for Dundalk Terminals located in Dundalk, Maryland.

Working closely with the Transdevelopment Group, a world-class developer of specialized transportation facilities, Rubb engineered the 70' (21.37m) x 175' (53.35m) BVE structure with 19.7' (6m) sidewalls to the client's exact specifications. Complicating matters was a tight construction timeframe of 90 days which in the end was successfully met.

Like so many Rubb clients, the Transdevelopment Group has purchased several Rubb structures over the years for various facilities and clients.

The Rubb organization, with production facilities in the United States, Great Britain, and Norway, is recognized as a world leader in the design, development, and manufacture of relocatable structures.
