

Construction shelters

Temporary fabric shelters

Rubb Buildings Ltd provides temporary fabric shelters and semi-permanent construction shelters, tents and covers to the construction industry to protect ongoing building projects from the elements and external weather conditions.

Rubb Buildings can get your personnel and construction materials under cover quickly and economically, allowing work to progress at a faster pace to meet project deadlines and ensuring higher product quality.

Rubb's tough and durable temporary construction shelters allow relocation and reuse at many different construction sites as clients' needs change. Rubb construction shelters or moveable shelters provide cost effective solutions when compared to traditional shelters and buildings used on construction sites.

Rubb construction tents and construction covers can be easily moved around an existing site or quickly relocated to another site, providing fast, flexible and durable shelter solutions for construction projects of all types.

Advantage points

The design and planning flexibility, speed of construction and durable, cost effective operation of Rubb buildings provide construction companies the perfect custom covering shelter.

Rubb's unrivaled skills and experience in providing manufacturing tents enable us to design, fabricate, deliver and install responsibly engineered shelters which fully meet our clients' needs.

- Steel/fabric hybrid designs
- Proven durability
- High quality materials
- Wide range of fabric colours
- Modular design flexibility
- Completely relocatable
- Lifiable and moveable
- Superior corrosion protection
- Fire retardant fabric membrane
- Low life cycle cost
- Fast design and construction
- First class customer service

THA Fabric Shelters

The Rubb THA fabric shelter range features robust industrial tents and portable temporary shelters to suit your construction, manufacturing and storage requirements.

THA Rubb shelters are available in 6m, 8m, 10m, and 12m span widths with 3.3m high sidewalls. These industrial tents can be supplied in any length in 3m modules.

Rubb THA shelters can be used as either temporary or permanent site buildings. All shelters are easy to erect by either your own labour force, by a Rubb construction team or by using a Rubb adviser together with your own labour.

Rubb fabric shelters can be quickly designed, manufactured and constructed to suit clients' needs, available space and site

restrictions. The rapid and easy installation of this efficient storage solution ensures downtime is kept to a minimum.

The structural steelwork is hot dipped galvanized to protect against corrosion. The covering membrane is fabricated from high tenacity PVC polyester fabric, which is flame retardant. This is tensioned over the frame.

The roof material is typically translucent white to allow natural light inside, and the walls are available in a variety of colours. THA structures are liftable, moveable and extendable - the perfect answer to ever changing logistical needs.

Visit our websites www.rubbuk.com for more THA fabric shelter information.
