

Salt & Sand Storage

The ideal salt storage shed solution

Rubb Building Systems is recognized as a worldwide leader in innovative, practical and cost-effective salt and sand storage solutions.

Rubb's salt storage buildings offer an effective alternative to wooden and metal bulk storage facilities. Our salt and sand storage barns can be designed to accommodate conveyors and other loading methods: retaining side walls, utilizing Rubb's innovative BulkBlock™ foundation system can also be integrated to resist lateral loadings.

Rubb salt sheds and sand storage buildings are engineered and detailed to exacting standards. The materials and methods incorporated into our product are chosen to provide a structure with an expected life of over 20 years with minimal to no long-term maintenance.

Rubb salt storage sheds are specifically designed to hold up in difficult environmental and corrosive conditions, making them the ideal containment solution.

Advantage points

The design and planning flexibility, speed of construction and durable, cost effective operation of Rubb buildings provide salt storage companies the perfect custom covering structures.

Rubb's unrivaled skills and experience in providing storage facilities enable us to design, fabricate, deliver and install responsibly engineered structures which fully meet our clients' needs.

- Steel/fabric hybrid designs
- Proven durability
- High quality materials
- Wide range of fabric colours
- Modular design flexibility
- Completely relocatable
- Lifiable and moveable
- Superior corrosion protection
- Fire retardant fabric membrane
- Low life cycle cost
- Fast design and construction
- First class customer service

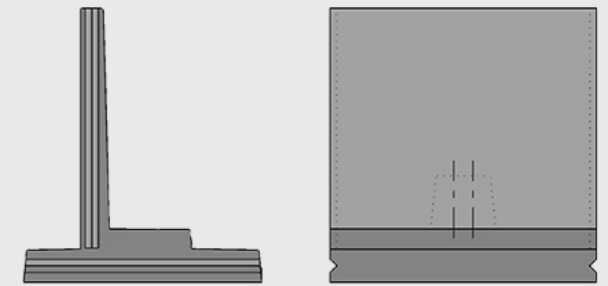

Rubb Bulk Blocks

Rubb Bulk Blocks serve as one of our most accommodating foundation options yet. Built with high strength steel that is reinforced in pre-cast concrete, Rubb Bulk Blocks are engineered to meet building codes that other foundations may not.

Rubb Bulk Blocks can remain permanent or be relocated in the case of a temporary structure. They serve as both a foundation and a retaining wall, a convenient and economical design that is ideal for all bulk storage needs including sand, salt, and agricultural storage facilities.

Rubb Bulk Blocks can also be locally produced, providing a less expensive solution to traditional poured foundation.
